

## 2: play store page theme

Reference Url : <https://play.google.com/store/apps/top/category/GAME>

We do not want sections on the WEB site that are not included in this screenshot.

Cards can be resize with window resize and image size should change with the cards. But the image ratio will stay as it.

You can decrease or increase the number of cards in a row, according to the situation of changing the window width too much. For example, you can set min-width as 150px and the max-width as 200px of a card.

Text field height is static. Will remain the same px in all window sizes
